EDUCATION

Case Western Reserve University

Jan. 2026

M.S. in Computer Science; B.S. in Computer Science, Computer Engineering

GPA: 4.0/4.0 (M.S.), 3.7/4.0 (B.S.)

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, JavaScript, SQL

ML & Data: PyTorch, LangChain, LangGraph, Hugging Face, FAISS, Scikit-learn, OpenAI API, HPC, Slurm, MCP

Backend & Infra: Next.js, React, Node.js, PostgreSQL, AWS, Redis, Kafka, Docker, Kubernetes, Terraform, CI/CD

Awards & Leadership: CWRU Grant, Dean's High Honors List, Robotics Club Tech Lead, Faculty Search Committee

EXPERIENCE

AI Software Engineer Co-op

Jun. 2025 – Present

Intrastack Solutions

Orlando, FL

- Developed a production RAG pipeline for an enterprise knowledge base using LangChain and Amazon Bedrock, processing 40K+ daily queries at 94% answer accuracy via semantic chunking and hybrid retrieval.
- Fine-tuned Llama 2 7B on 50K+ domain-specific customer support conversations with LoRA/QLoRA, achieving 91% intent classification accuracy and cutting inference costs 60% through 4-bit quantization.
- Built a real-time recommendation engine using collaborative filtering with PyTorch embeddings trained on 2M+ interactions and Redis caching for hot user profiles, increasing CTR by 21% and reducing response time by 55%.
- Developed Java Spring Boot REST APIs and PostgreSQL schemas for client dashboards; eliminated N+1 queries and added composite indexes, reducing p95 latency by 65% and sustaining 8K+ daily active users.
- Provisioned AWS infrastructure (ECS, RDS, S3) with Terraform and automated CI/CD via GitHub Actions, enabling containerized zero-downtime deploys across 8 microservices and cutting release cycles by 70%.
- Engineered MCP server integrations connecting Claude-powered agents to internal tools (Jira, Slack, GitHub), enabling automated workflow orchestration across 6 APIs and reducing manual operations time by 35 hours/week.

Software Engineer Intern

Jun. 2024 – Aug. 2024

FPT Software

Richardson, TX

- Led a project to build a RESTful product discovery service in FastAPI with pgvector and optimized PostgreSQL indexes on an e-commerce platform, serving 5K+ daily users and improving search relevance by 42%.
- Designed a fault-tolerant Kafka and DynamoDB event ingestion pipeline processing 40K+ daily workflow events with dead-letter queues, retry logic, and distributed tracing, achieving 99.9% delivery reliability.
- Migrated authentication from legacy OAuth to AWS Cognito with MFA for internal tools used by 250+ engineers, eliminating a class of session fixation vulnerabilities and reducing login errors by 35%.

Machine Learning Research Intern

Mar. 2024 – Jan. 2026

Case Western Reserve University

Cleveland, OH

- Developed a distributed PyTorch dictionary learning pipeline on a Slurm-managed HPC cluster to decode touch stimuli, processing 3M+ neural signals with data parallelism and mixed-precision, cutting training time by 3x.
- Deployed model serving endpoints on a shared Kubernetes cluster using Helm charts and resource quotas.
- Engineered SQL feature pipeline over relational tables with complex aggregations, window functions, and query-optimized indexes, producing 50+ statistical features that improved model AUC from 0.78 to 0.89.

PROJECTS

AI Financial Document Processing Platform | *Next.js, Supabase, Vercel, PostgreSQL, Redis, Docker, Tailwind CSS*

- Built and deployed a multimodal RAG system with Next.js 15, Tailwind CSS, and Gemini 1.5 Flash, achieving 95%+ field extraction accuracy and <3s latency on 1-5 page financial documents via parallel API calls.
- Engineered an agentic query router with Vercel AI SDK and Redis semantic caching, cutting latency from 1.4s to <500ms at 70% cache hit rate; secured multi-tenant data isolation with row-level security and connection pooling.
